Press release

Paris, May 12th 2021

Rofim choose Euris Health Cloud® to consolidate telemedicine "Made in France"

Rofim has chosen the Euris Health Cloud Hybrid AWS® solution for the deployment of its secure telemedicine platform, designed to facilitate the exchange, sharing and mutual support between members of the medical community in France.

A secure space dedicated to doctors, designed by HCP to develop collaborative diagnosis

Rofim's medical platform was born to meet the growing demand of healthcare professionals to exchange & share their expertise to improve the management of complex diseases, in a secure environment.

Since its arrival in 2018 on the digital health market, Rofim's mission is to improve patient care while facilitating the daily life of healthcare professionals, through the services offered of teleconsultation, tele-expertise, Multidisciplinary Consultation Meeting and instant secure messaging.

The beginning of a fruitful collaboration

Since the start of the collaboration in 2019, the SaaS application has been hosted by Euris Health Cloud® via a secure and dedicated infrastructure, integrating the AWS service catalog. This hybrid modality guarantees an efficient exchange of information, respecting the specific and sensitive nature of healthcare data.

The adaptability of the health data hosting infrastructure was a key criterion for Rofim. The ongoing geographical expansion requires a flexible, highly secure and rapidly scalable architecture. Euris Health Cloud® Hybrid AWS is the perfect answer to this challenge, providing the best of both cloud worlds: a private cloud infrastructure interconnected at high speed with AWS public cloud resources. All secured, approved and certified by Euris Health Cloud® for all 6 activities defined by the HDS: 2018 and ISO/IEC 27001: 2013 certifications.

Adaptability & service quality

Strengthened by an ever-expanding network of experts, Rofim hopes to become the reference in digital health in France.

Whether on computer, tablet or smartphone, the Rofim offer can be accessed directly on https://www.rofim.doctor/ or the Rofim mobile application available on Android and IOS.

Since 2019, Rofim is used in more than 300 establishments in France.

"Our commitment is to reduce diagnostic errors by facilitating the exchange between experts in the medical community. Rofim relies on partners already widely acclaimed, Euris Health Cloud® and AWS, to bring our digital innovations to the service of our doctors, our caregivers and our patients" says Emilie MERCADAL, CEO and founder of Rofim.

Reinventing Health Services in times of crisis

Teleconsultation on Rofim was created following the emergence of COVID 19 in response to a need of user physicians. In concrete terms, it was a question of participating in the collective effort to curb the spread of Covid, by making it available to hospitals free of charge.

Values of responsiveness, commitment and civic responsibility also shared with the Euris Health Cloud® and AWS partner teams.

«Euris Health Cloud® is very proud to be chosen by a leading player in telemedicine and tele-expertise like Rofim. Once again, this is evidence that we have acquired expertise in the implementation of healthcare infrastructures adapted to the current challenges of health data, namely security, compliance and confidentiality guarantees, but also in our ability to set up a hybrid offer with our AWS partner, allowing adaptability to specific environments and the scalability desired by our client." says Pedro Lucas, CEO and founder of Euris Health Cloud®.

As a group dedicated to the connected health market, Euris' mission is to support Healthcare and Life Sciences companies in the implementation of their health IT projects, through digital solutions and a certified multi-territory health data hosting infrastructure.

At the heart of a healthcare ecosystem of excellence, Euris operates these new services within a structured regulatory framework, guaranteeing a high level of quality, security and compliance.

https://www.euris.com/

Part of the Euris group, Euris Health Cloud ® is a connected health operator, specialized in health data hosting. Global compliance: EU (HDS & ISO 27001), US (HIPAA), China (CSL).

Through a unique marketplace model, Euris Health Cloud ® also offers a full range of interoperable services and solutions, facilitating the deployment of e-health projects: strong authentication, drive, archiving, backup, anonymization, Big Data, Business Intelligence, IoT, CRM, and PRM.
Since 2019, Euris Health Cloud ® is a Select AWS partner.

Rofim solution is the result of a long work of observation, listening and research to develop together with users - the whole medical world - an intuitive solution materialized by a collaborative diagnosis and telemedicine platform tailored. Today, this network consists of more than 5,000 doctors.

	Hybrid Healthcare Cloud - AWS, a flexible, secure and efficient solution for managing your healthcare data
	Euris Health Cloud® Hybrid AWS provides the best of both cloud worlds: a private cloud infrastructure interconnected at high speed with AWS public cloud resources. All secured, approved and certified by Euris Health Cloud® for all 6 activities defined by the HDS: 2018 and ISO/IEC 27001: 2013 certifications. Our hybrid offer allows you to leverage the computing power of the AWS cloud (medical imaging processing, high-volume data analysis, etc.) while maintaining a private infrastructure for your sensitive resources. The hybrid cloud provides budget flexibility, as you can choose where to store different types of data based on what is most cost effective.
